As Director of Information Technology, Sean Sanderlin is responsible for the overall planning, organizing, and execution of all IT functions at the firm. This includes directing all IT operations to meet firm requirements as well as the support and maintenance of existing applications and development of new technical solutions. Sean and his team of highly skilled and dedicated IT professionals work to ensure a competitive advantage for Coblentz by coupling the firm's attorneys with leading edge technical capabilities.

Sean has been a highly successful architect, engineer, and senior manager in the information technology field for almost twenty years. Prior to joining Coblentz, he was Manager of Software Development of a Houston-based upstream oil and gas company. He has also served as Director of Software Development at Texas-based law firm Jackson Walker LLP for more than thirteen years. Sean has served as a managing consultant at a national firm, architecting technology solutions for a broad client base across many industries. He is an accomplished software engineer who has developed numerous in-house solutions, such as new business intake workflows, custom CRM, and innovative data warehouse/business intelligence systems. He has also led and participated in the development of commercial software applications. Sean regularly advises peers on software architecture and design, and participates in open source development projects.

Professional Activities

Sean regularly advises peers on software architecture and design, and participates in open source development projects.
